

Hole Number: ER08-66

Units: METRIC

Project Name: Norway - South Norway	Primary Coordinates Grid: UTM84-32N	Destination Coordinates Grid: UTM:	Collar Dip: -49.80
Project Number: 203	North: 6659881.80	North: 60.07	Collar Az: 57.80
Location: Surface	East: 557923.66	East: 10.04	Length: 124.66 (m)
	Elev: 199.76	Elev: 199.76	Start Depth: 0.00 (m)
Date Started: May 12, 2008	Collar Survey: N	Plugged: N	Contractor: Drillcon Core AB
Date Completed: May 25, 2008	Multishot Survey: N	Hole Size: NQ	Core Storage: Tyrstrand
Logged By: vbno	Pulse EM Survey: N	Casing: Left in Hole	Final Depth: 124.66 (m)

Comments: This hole was designed to test mineralization at the GNOR/Footwall contact at approximately 100m depth.

RESULTS:
52.10 - 55.90 blebby sulphides (pyrite, pyrrhotite and some chalcopyrite) 4-6%

Sample Averages

7.10	55.90	GNOR, Gabbro Norite Green-grey coarse grained Gabbro-Norite, trace sulphides - At lower contact to footwall - blebby mineralization (pyrite, pyrrhotite and chalcopyrite). Competent, with several broken sections 5-100 cm long, no gouge, but some soft mineral infill. Moderate chlorite dissemination and fracture controlled chlorite alteration. Some interstitial mica. 3 mafic dykes, 15-30 cm long. Lower contact sees very few coarse grains of po/pn over 10 cm. Not sampled. From (m)	To (m)		Sample Number	From (m)	To (m)	Length (m)	Ni%	Cu%	Co%
55.90	124.65	FGN, Felsic Gneiss White and pink medium to coarse grained Felsic Gneiss. Upper contact is sharp with veins of FGN/GNOR 50 cm from contact. FGN is lightly banded and is overprinted with small garnets, giving mottled appearance. At the contact the rock is competent, with few brittle fractures but with depth the core gets more fractured. Some parts are brecciated or consist of fault gouge. No sulphides.
